

Empower Your Officers with Mobile Scanning

Anyline improves officer situational awareness by enabling them to identify people, property and vehicles in seconds.

Offline data capture

Offline data capture
ensures security

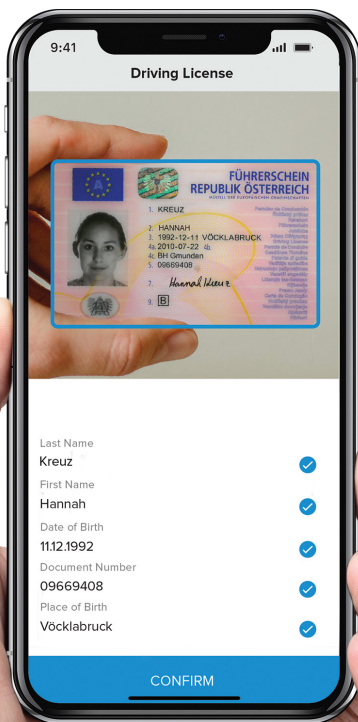

Easily integrated with
NFC chip reading

Data capture incl.
verification image

20 times faster
than manual data entry

Keep your officers in the field

Let officers securely collect information on the go

Instantly identify people by scanning their driver's license, ID or passport (including NFC chip), as well as vehicles and property by collecting VINs, license plates and product serial numbers.

Offline data processing for maximum security

Anyline data capture takes place entirely on the officer's device, before being transferred safely to your internal system.

Reduce time spent during stop and search, and traffic stops

Mobile scanning removes the delays and errors of manual data entry, improving the integrity of data gathered in the field.

Our innovative, yet user-friendly features improve the user experience for officers and increase adoption rates for mobile policing solutions. To ensure your success, Anyline can tailor the right solution to fit your needs, and provides expert support throughout your process - from beginning through to launch and beyond.
